[github.com/ParasRimal](#)

Driven learner focused on AI, machine learning, and database systems. Passionate about understanding the mathematical principles and internal workings of ML algorithms, with a keen interest in applying data-driven solutions to industry projects.

EDUCATION

BSc (Honors) Computer Science with Artificial Intelligence

Sunway College Kathmandu

2024 – 2028

Maitidevi, Kathmandu

Higher Secondary Education (+2) in Science

Kathmandu Model Secondary School

2022 – 2024

Balkumari, Lalitpur

SKILLS

Technical Skills

- Programming Languages: Python, JavaScript
- AI & ML: ML Algorithms (Decision Trees, Regression, Classification), Model Evaluation & Drift Detection
- APIs & Web: FastAPI, Django, REST APIs, React

Data & Tools

- Databases & CS Foundations: MySQL, Relational Database Design, DSA
- MLOps & Pipeline Tools: Apache Airflow (DAGs), MLflow, Evidently AI, Grafana (Dashboards)

PROJECTS

Heart Disease Prediction using ML (Random Forest and Logistic Regression)

- Built and evaluated predictive models (Logistic Regression and Random Forest) to classify heart disease risk using clinical and lifestyle data.
- Performed data preprocessing, EDA, feature engineering, and developed a user-input prediction interface with performance comparison using Accuracy, F1-score, and ROC-AUC.

Smart Grid Peak Load Risk Prediction (Apache Airflow · MLflow · FastAPI · Evidently AI · Grafana)

- Designed and deployed a production-grade system for smart grid data ingestion, transformation, and hourly training of Random Forest, XGBoost, LightGBM, and Gradient Boosting models via Apache Airflow, with champion registration in MLflow and serving through FastAPI REST API + custom web UI.
- Enabled drift detection with Evidently AI, automated retraining, and real-time Grafana dashboards; fully containerized with Docker using MariaDB ColumnStore + Redis cache, achieving 90%+ accuracy through composite target engineering.

Bus Reservation System (PHP, MySQL, JavaScript, Bootstrap)

- Developed a comprehensive booking platform using PHP and MySQL, featuring real-time trip scheduling, a 2x2 visual seat selection map, and automated PNR-based e-ticket generation.
- Engineered a responsive multi-tenant architecture with HTML, CSS, Bootstrap, and JavaScript, ensuring strict data isolation for independent operators and an intuitive interface for passengers.

CERTIFICATIONS & ACHIEVEMENTS

Git & React

Built a personal portfolio website using the React framework.

Sunway College

Kathmandu

Learn Python Basics

Developed small projects demonstrating loops, functions, and data handling.

Programiz

Bronze Award - BCU Graduate+

Recognized for achievement in professional development and employability skills.

Birmingham City

University
